CARE

Care for your handwoven piece

Handwoven plant fibre — bamboo, seagrass and other plant fibres

1. Dust along the weave with a soft brush, or a vacuum on its lowest setting with a brush attachment.
2. For a mark, use a cloth wrung out until it does not drip. Wipe with the weave, dry the same place with a dry cloth, and let the piece air.
3. Keep it out of direct sun and away from radiators and air outlets. Dry air is what makes plant fibre crack.
4. Do not soak it, steam it, or use bleach, detergent, oil or spray polish. Do not store it sealed in plastic.
5. The colour will settle and shift a little as it ages. That is untreated plant fibre behaving like untreated plant fibre.

It was woven damp and holds its shape because it dried. Water is what makes it bendable, and dry air is what makes it crack.
